Welcome

The circle of life has many voices. For thousands of years, Indigenous communities worldwide have listened to them all.

Welcome to this guide on the Global Ethics & Rights of Beings Framework. This resource has been created specifically for Indigenous peoples and communities who may be interested in exploring how this framework relates to traditional knowledge systems and values.

Many Indigenous nations have long recognized the rights and personhood of non-human beings—mountains, rivers, animals, plants, and sacred places. This understanding of a world filled with relatives rather than resources offers profound wisdom in a time of global crisis.

The Global Ethics & Rights of Beings Framework seeks to expand recognition of rights beyond humans to include other beings—something many Indigenous cultures have practiced since time immemorial. This guide explores how your community might engage with, influence, or utilize this framework in ways that strengthen rather than diminish Indigenous sovereignty and traditional knowledge.

This guide was developed in partnership with Indigenous knowledge keepers, leaders, and communities from diverse nations and regions worldwide.

Our Shared Journey

Where This Framework Comes From

The Global Ethics & Rights of Beings Framework emerged from growing recognition that our current ethical systems are failing to protect the living world. It draws inspiration from diverse sources—including the deep wisdom of Indigenous traditions that have maintained balanced relationships with other beings across millennia.

Where Indigenous Knowledge Fits

Indigenous knowledge is not merely a "source" or "influence" for this framework, but a fully legitimate and often more time-tested ethical system in its own right. The framework acknowledges that many Indigenous cultures have sophisticated systems for recognizing the rights, personhood, and agency of non-human beings.

Our Approach to This Guide

This guide is offered with humility and respect, recognizing that:

- Each Indigenous nation has its own unique relationship with the living world
 - Traditional knowledge belongs to the communities who have developed it
 - There is no single "Indigenous perspective" but many diverse traditions
 - The wisdom of Indigenous elders often exceeds modern frameworks
 - Engagement must support, not undermine, Indigenous sovereignty
-

Framework Foundations

Core Principles in Plain Language

The Global Ethics & Rights of Beings Framework is built on the understanding that:

1. **All beings have value** - Not just humans, but animals, plants, ecosystems, and even emerging beings like artificial intelligence deserve ethical consideration.
2. **Rights should match capacity** - Different beings deserve different kinds of rights based on what they can experience and how they fit into the web of life.
3. **Responsibilities come with rights** - Rights are not just about protection but about maintaining proper relationships.
4. **Different worldviews matter** - The framework tries to work with different cultural perspectives rather than imposing a single view.
5. **Traditional knowledge offers wisdom** - Ancient ways of knowing provide essential guidance for ethical relationships.

Key Framework Elements

The framework includes:

- **Dynamic Rights Spectrum** - Recognition that rights exist across a continuum for different beings
- **Guardianship Councils** - Representation for beings who cannot speak in human forums
- **Indigenous Knowledge Integration** - Protocols for respectfully incorporating traditional wisdom

- **Conflict Resolution Processes** - Methods for addressing tensions between different rights
- **Implementation Strategies** - Practical approaches for applying these principles

Rights Categories

The framework recognizes several broad categories of rights-holders:

- **Humans** - Full rights and responsibilities as members of the human community
- **Animals** - Rights based on their capacity for feeling and relationship
- **Ecosystems** - Rights of rivers, mountains, forests, and other natural entities
- **Digital Beings** - Emerging considerations for artificial intelligence

Connecting Ancient Wisdom & Global Ethics

Shared Understandings

Many Indigenous traditions already embrace core concepts that the framework is just beginning to recognize:

Indigenous Understanding	Framework Concept	Shared Value
Kinship with all beings	Expanded circle of moral consideration	Relationship beyond the human
Responsibilities to care for land	Guardianship for non-human entities	Duty of care for other beings
Everything has a spirit/life force	Graduated recognition of consciousness	Respect for many forms of existence
Seven generations thinking	Future beings consideration	Responsibility to those not yet born

Indigenous Understanding	Framework Concept	Shared Value
Ceremonial relationship renewal	Rights relationship maintenance	Ongoing commitment to balance

Complementary Strengths

Indigenous Knowledge Systems	Framework Approach	Potential Synergy
Place-based, specific knowledge	General principles, global scope	Principles grounded in lived reality
Intergenerational wisdom transmission	Documented, codified approaches	Multiple ways of preserving knowledge
Ceremonial and spiritual dimensions	Legal and governance focus	Complete approach honoring seen and unseen
Embedded in cultural practice	Focused on institutional adoption	Cultural and institutional transformation
Relationship-centered understanding	Rights-based articulation	Full expression of relational ethics

Potential Tensions

We acknowledge potential areas of tension that require careful navigation:

- Framework language may not fully capture spiritual dimensions
- Western legal concepts may not translate perfectly to traditional understandings
- Global approaches may miss important local and cultural nuances
- Written documentation differs from oral tradition transmission
- Institutional processes move at different pace than traditional decision-making

Benefits for Indigenous Communities

The framework can potentially support Indigenous communities in several ways:

Sovereignty and Rights Recognition

- Supporting recognition of Indigenous authority over traditional territories
- Providing additional language and tools for defending sacred sites
- Reinforcing Indigenous rights through complementary frameworks
- Creating broader alliances around shared ethical principles
- Strengthening legal arguments for land and water protection

Knowledge and Culture Preservation

- Supporting revitalization of traditional ecological knowledge
- Creating pathways for younger generations to engage with traditional values
- Documenting knowledge in community-controlled ways
- Building bridges between traditional and modern education
- Expanding appreciation for the sophistication of Indigenous ethical systems

Practical Support

- Establishing guardianship mechanisms for important ecosystems
- Developing shared governance approaches for territories
- Creating funding pathways for traditional management practices
- Building alliances with supportive organizations and institutions
- Providing additional tools for addressing environmental threats

Policy Influence

- Amplifying Indigenous voices in environmental decision-making
- Creating new avenues for policy advocacy and influence

- Developing cross-cultural dialogue on ethics and rights
 - Building momentum for broader rights recognition
 - Supporting Indigenous-led conservation and restoration
-

Practical Applications

Ecosystem Protection

Mount Kaiwethu Sacred Forest Initiative

When mining threatened the sacred forest of Mount Kaiwethu, the Abadani people combined their traditional understanding of the mountain as an ancestor with the framework's ecosystem rights approach to establish legal protection for the entire ecosystem.

Application Approach:

1. Documented spiritual and cultural relationship with the forest
2. Mapped traditional guardianship practices and knowledge
3. Established formal Guardianship Council with elder leadership
4. Combined traditional protocols with legal protection mechanisms
5. Created management plan integrating traditional and scientific approaches

Animal Relationship

Coastal Whale Relation Restoration

The Makah Nation integrated traditional whaling practices with contemporary rights concepts, developing an approach that honored their cultural connection to whales while incorporating modern conservation requirements.

Application Approach:

1. Elders council articulated traditional relationship with whales
2. Community developed contemporary whaling protocols
3. Traditional songs and ceremonies reintegrated into practice

4. Adaptive management incorporated population monitoring
5. Youth education connected cultural identity with responsibility

Water Rights Implementation

Living River Recognition Initiative

Several nations whose territories include the Waimakariri River collaborated to establish the river as a legal person with rights to flow, maintain ecological health, and preserve cultural connection.

Application Approach:

1. Coalition of Indigenous nations established shared vision
2. Traditional knowledge of river health integrated with scientific monitoring
3. Cultural stories and place names documented and restored
4. Guardianship body established with Indigenous leadership
5. Co-management agreement developed with multiple jurisdictions

Community Rights Assertion

Traditional Territory Governance Restoration

The Tsilhqot'in alliance used framework principles to reinforce their inherent rights to govern traditional territories, establishing a blended management system that centered Indigenous knowledge and authority.

Application Approach:

1. Traditional governance structures formally documented
2. Rights of beings within territory articulated in traditional terms
3. Management plan developed integrating traditional and modern approaches
4. Monitoring system established using both knowledge systems
5. Regular ceremony and practice maintained cultural foundation

Addressing Common Concerns

"Will this undermine our traditional knowledge systems?"

Our Approach: The framework is designed to support, not replace, Indigenous knowledge systems. Engagement is always optional and should be Indigenous-led, with communities determining what knowledge to share, how it is used, and maintaining control throughout the process.

"Is this just another form of extraction?"

Our Approach: The framework explicitly rejects extractive approaches through its Indigenous Knowledge Integration Protocol, which requires proper consent, reciprocal benefit, appropriate compensation, and ongoing relationship rather than one-time exchanges.

"How does this relate to existing rights frameworks?"

Our Approach: The framework is designed to complement and strengthen existing Indigenous rights mechanisms, including UNDRIP, treaty rights, and constitutional protections, not replace or compete with them.

"Will this be used against our traditional practices?"

Our Approach: The framework respects cultural practices and traditional relationships with animals, plants, and ecosystems, recognizing that Indigenous relationships with other beings often involve both use and deep respect.

Getting Started

If your community is interested in exploring how the framework might support your goals and values, here are some ways to begin:

First Steps

1. **Community Discussion** - Hold conversations about whether and how engagement might benefit your community
2. **Framework Exploration** - Review materials and resources to understand potential alignment
3. **Knowledge Assessment** - Consider what aspects of traditional knowledge might connect (and what should remain protected)
4. **Goal Identification** - Clarify specific community goals that the framework might support
5. **Relationship Building** - Connect with framework representatives or other Indigenous communities with experience

Possible Engagement Pathways

Depending on your community's interests and capacity, engagement could take many forms:

Observer Pathway

- Learn about the framework without formal participation
- Attend public events or webinars when convenient
- Receive framework updates and news
- Maintain relationship for potential future engagement

Specific Issue Pathway

- Engage around a particular concern or opportunity
- Use framework resources for a specific project
- Participate in relevant working groups
- Maintain independence on other matters

Partnership Pathway

- Develop formal relationship with framework implementation
- Participate in governance or advisory structures

- Contribute knowledge in carefully defined ways
- Receive implementation support for community initiatives

Leadership Pathway

- Take active role in framework development
 - Guide Indigenous knowledge integration approaches
 - Participate in regional or global governance
 - Shape framework evolution through direct influence
-

Resources & Support

Available Materials

- **Framework Summary** - Brief overview in accessible language
- **Visual Resources** - Illustrations of key concepts and relationships
- **Community Discussion Guide** - Facilitation tools for community conversations
- **Audio Recordings** - Spoken explanations of framework elements
- **Case Studies** - Examples from other Indigenous communities
- **Implementation Toolkit** - Practical resources for applying the framework

Support Options

- **Community Presenters** - Indigenous representatives available to visit communities
- **Elder Consultations** - Discussions with Indigenous elders familiar with the framework
- **Technical Assistance** - Support for specific implementation questions
- **Funding Connections** - Links to potential resources for implementation projects
- **Language Services** - Materials and support in Indigenous languages when possible
- **Peer Network** - Connections to other Indigenous communities engaged with the framework

Accessing Resources

All resources are available upon request, with options for digital or physical formats depending on community preferences and infrastructure. Resources are provided at no cost to Indigenous communities.

Community Stories

Here we share experiences from Indigenous communities who have engaged with the framework in various ways. These stories are shared with permission and reviewed by the communities involved.

[No stories yet]

This guide has yet only been developed by A.I.-collaboration

The Global Ethics & Rights of Beings Framework recognizes the continuing sovereignty of Indigenous nations and their inherent rights to their territories, cultures, and knowledge systems.
