

Climate-Energy Policy Integration Matrix

Introduction

The **Climate-Energy Policy Integration Matrix** is a practical tool within the *Climate & Energy Governance Implementation Framework*, designed to help stakeholders align climate and energy policies across sectors, governance levels, and the Framework's four pillars: Climate Mitigation, Climate Adaptation, Energy Transition, and Innovation & Technology. This tool ensures that policies are cohesive, synergistic, and free of conflicts, supporting the Framework's goals of achieving net-zero emissions by 2050, universal clean energy access, and climate resilience for vulnerable communities.

The matrix enables policymakers, regional authorities, National Implementation Units, and other governance actors to map existing policies, identify gaps and synergies, and integrate new policies to align with Framework targets. It emphasizes cross-sectoral coordination (e.g., energy, transport, agriculture) and multi-level governance (global, regional, national), while incorporating stakeholder input to ensure equity and inclusivity.

Objectives

- Map existing climate and energy policies to assess alignment with Framework goals.
- Identify policy gaps, conflicts, and opportunities for synergy across sectors and governance levels.
- Integrate new or revised policies to support the Framework's four pillars and milestones.
- Engage stakeholders to ensure equitable and inclusive policy design.
- Monitor and evaluate policy integration outcomes using standardized metrics.

Target Audience

- National and regional policymakers
- National Implementation Units

- Regional authorities and economic planners
 - Sectoral ministries (e.g., energy, environment, transport, agriculture)
 - Civil society organizations (CSOs) advocating for policy coherence
 - Businesses aligning operations with climate goals
-

Instructions

1. Map Existing Policies:

- Use the matrix template in Section 2 to list current climate and energy policies across relevant sectors and governance levels.
- Assess alignment with the Framework's four pillars and key targets (e.g., 50% emissions reduction by 2035).

2. Identify Gaps and Synergies:

- Analyze the matrix to identify policy gaps, conflicts, or synergies using the prompts in Section 3.
- Engage stakeholders via the [Stakeholder Engagement Protocol](#) to validate findings.

3. Develop Integration Strategies:

- Propose new or revised policies to address gaps and leverage synergies, using the template in Section 4.
- Align strategies with Framework milestones (e.g., 60% renewable energy by 2035) and tools like the [Just Transition Planning Template](#).

4. Monitor and Evaluate:

- Track integration outcomes using the metrics in Section 5, aligned with the Integrated Climate Metrics System (ICMS).
- Report progress via the [Climate Policy Dashboard](#).

5. Seek Support:

- Explore the Regional Hub concept at globalgovernanceframework.org/framework/hubs or contact existing regional organizations.

- Email globalgovernanceframework@gmail.com for technical assistance or partnership opportunities.

Climate-Energy Policy Integration Matrix

1. Matrix Overview

The matrix maps policies across sectors, governance levels, and the Framework’s four pillars to assess alignment and identify integration opportunities. It is structured as follows:

- **Rows:** Sectors (e.g., energy, transport, agriculture) and governance levels (national, regional).
- **Columns:** Framework pillars (Mitigation, Adaptation, Energy Transition, Innovation & Technology) and key Framework targets.
- **Cells:** List relevant policies, their alignment status, and integration notes.

Instructions: Customize the sectors and governance levels to your context. Use the Framework’s [Policy Mechanisms](#) section for policy examples.

2. Policy Mapping Matrix

Fill out the matrix to map existing policies and assess their alignment with Framework pillars and targets.

Sector/Governance Level	Climate Mitigation (50% emissions reduction by 2035)	Climate Adaptation (75% vulnerable communities protected by 2035)	Energy Transition (60% renewable energy by 2035)	Innovation & Technology (Scale clean tech by 2030)
Energy (National)	Policy: Carbon tax (\$50/tCO2e)	Policy: None Alignment: None Notes: Develop	Policy: Renewable energy	Policy: R&D grants for green

Sector/Governance Level	Climate Mitigation (50% emissions reduction by 2035)	Climate Adaptation (75% vulnerable communities protected by 2035)	Energy Transition (60% renewable energy by 2035)	Innovation & Technology (Scale clean tech by 2030)
	Alignment: Partial (needs scaling to \$135/tCO2e) Notes: Expand to include border adjustments	adaptation measures for energy infrastructure	mandate (40% by 2030) Alignment: Strong Notes: Accelerate to 60% by 2035	hydrogen Alignment: Strong Notes: Increase funding for deployment
Transport (National)	Policy: Electric vehicle (EV) subsidies Alignment: Strong Notes: Expand charging infrastructure	Policy: None Alignment: None Notes: Plan for climate-resilient transport networks	Policy: EV target (20% by 2030) Alignment: Partial Notes: Increase to 80% by 2040	Policy: None Alignment: None Notes: Support autonomous EV tech
Agriculture (Regional)	Policy: Methane capture incentives Alignment: Partial Notes: Scale to 50% methane reduction by 2035	Policy: Drought-resistant crop programs Alignment: Strong Notes: Expand to 75% of farmers by 2035	Policy: None Alignment: None Notes: Promote bioenergy crops	Policy: Precision farming tech grants Alignment: Partial Notes: Increase access for small farmers
Regional Governance	Policy: Regional emissions reporting	Policy: Regional early warning systems Alignment:	Policy: Regional renewable grid plan	Policy: Regional innovation hub

Sector/Governance Level	Climate Mitigation (50% emissions reduction by 2035)	Climate Adaptation (75% vulnerable communities protected by 2035)	Energy Transition (60% renewable energy by 2035)	Innovation & Technology (Scale clean tech by 2030)
	Alignment: Strong Notes: Integrate with ICMS	Strong Notes: Scale to 75% coverage by 2035	Alignment: Partial Notes: Align with national 60% target	Alignment: Strong Notes: Share tech with national units

Instructions:

- List policies for each sector/governance level and pillar.
- Assess alignment (Strong, Partial, None) with Framework targets.
- Add notes on gaps, conflicts, or opportunities.
- Use the [Governance Readiness Assessment Tool](#) to evaluate institutional capacity for policy integration.

Example: In Country X, the national energy sector’s carbon tax (\$50/tCO2e) is partially aligned with the Mitigation pillar (needs to scale to \$135/tCO2e by 2030), while no adaptation policies exist, creating a gap to address.

3. Gap and Synergy Analysis

Analyze the matrix to identify policy gaps, conflicts, and synergies.

Category	Findings	Action Needed
Gaps	E.g., No adaptation policies in transport sector	Develop climate-resilient transport infrastructure plans by 2027
Conflicts	E.g., Fossil fuel subsidies undermine renewable energy mandates	Phase out subsidies by 2030, redirect to clean energy

Category	Findings	Action Needed
Synergies	E.g., Methane capture in agriculture supports both Mitigation and Energy Transition	Scale methane capture to bioenergy production by 2035

Instructions:

- Review the matrix to identify missing policies (gaps), contradictory policies (conflicts), or complementary policies (synergies).
- Engage stakeholders via the [Stakeholder Engagement Protocol](#) to validate findings.
- Prioritize actions based on Framework milestones (e.g., 60% renewable energy by 2035).

Example: A gap in transport sector adaptation policies requires new plans for resilient infrastructure, while a synergy between methane capture and bioenergy in agriculture can be scaled to meet both Mitigation and Energy Transition targets.

4. Integration Strategies

Propose new or revised policies to address gaps, resolve conflicts, and leverage synergies.

Sector/Governance Level	Proposed Policy	Pillar Addressed	Timeline	Responsible Party	Funding Source
E.g., Transport (National)	Climate-resilient transport networks	Adaptation	2027-2030	Transport Ministry	Framework finance, national budget
E.g., Energy (National)	Scale carbon tax to \$135/tCO ₂ e	Mitigation	2028-2030	Finance Ministry	Carbon pricing revenues
E.g., Agriculture (Regional)	Bioenergy crop incentives	Energy Transition, Mitigation	2029-2035	Regional Authority	Private investment, Framework grants

Instructions:

- Propose policies to fill gaps, resolve conflicts, or build on synergies identified in Section 3.
- Align with Framework milestones (e.g., 75% vulnerable communities protected by 2035).
- Use the [Climate Finance Access Navigator](#) to identify funding.
- Integrate stakeholder input via the [Stakeholder Engagement Protocol](#).

Example: To address the adaptation gap in transport, Country X will develop climate-resilient transport networks by 2030, funded by Framework grants and national budgets, with stakeholder input from CSOs and businesses.

5. Metrics for Success

Establish indicators to evaluate policy integration outcomes, aligned with the Framework’s Integrated Climate Metrics System (ICMS).

Indicator	Target	Measurement Method	Frequency
Policy Alignment Rate	80% of policies aligned with Framework pillars by 2035	Analysis of policy documents vs. Framework targets	Biennial
Cross-Sectoral Synergies	50% of sectors with integrated policies by 2030	Number of policies addressing multiple pillars	Annual
Conflict Resolution	100% of identified conflicts resolved by 2030	Audit of policy coherence	Biennial
Stakeholder Input Integration	70% of stakeholder inputs reflected in policies by 2035	Comparison of stakeholder feedback vs. policy outcomes	Annual
Equity Outcomes	80% of vulnerable groups report policy benefits by 2035	Surveys of marginalized communities	Biennial

Instructions:

- Integrate metrics into ICMS for standardized reporting.
- Use surveys or policy audits to assess alignment, synergies, and equity.
- Report progress via the [Climate Policy Dashboard](#).

Example: Track policy alignment biennially (target: 80% by 2035) and survey vulnerable communities to ensure 80% report benefits from integrated policies by 2035.

Next Steps

1. **Review Results:** Share your matrix and integration strategies with key stakeholders to validate findings and build consensus on priorities.
 2. **Develop a Strategy:** Use the integration strategies and metrics to incorporate policy alignment into your broader climate and energy governance roadmap.
 3. **Connect to Regional Resources:**
 - Explore the Regional Hub concept at globalgovernanceframework.org/framework/hubs to understand how regional coordination can support your policy integration initiatives.
 - Identify existing regional organizations in your area that may provide similar functions to the conceptual Regional Hubs.
 4. **Access Support:**
 - Email globalgovernanceframework@gmail.com for technical assistance and to discuss potential regional collaboration opportunities.
 - Inquire about pilot projects or implementation partnerships related to the Regional Hub concept.
 5. **Monitor Progress:** Reassess policy integration annually to track improvements and adjust strategies based on metrics and stakeholder feedback.
 6. **Share Insights:** Contribute lessons learned to the Framework's knowledge repository to support global learning and inform Regional Hub concept development.
-

Contact and Further Information

For additional support:

- **Online Resources:** Access tools and guides at globalgovernanceframework.org/framework/tools/energy.
- **Technical Assistance:** Email globalgovernanceframework@gmail.com.
- **Regional Governance Concepts:** Learn more about the Regional Hub framework at globalgovernanceframework.org/framework/hubs.
- **Implementation Partnerships:** Inquire about opportunities to pilot Regional Hub functions in your region through globalgovernanceframework@gmail.com.

This matrix is a living document, updated periodically. Check the website for the latest version.
