

Climate Action Guide

A practical roadmap for youth, communities, and local leaders

Page 2: Our Shared Principles

These principles guide climate action at every level — from world leaders to you and your community.

1. Sustainability

Live and act in ways that protect nature and resources — so that future generations can thrive.

2. Equity

Not everyone caused the climate crisis equally — but everyone should be protected. Justice means lifting up the most vulnerable communities and respecting cultural approaches to climate action.

3. Science-Based Action

Follow what the best evidence shows — and act before it's too late. Combine scientific knowledge with traditional and indigenous wisdom.

4. Cooperation

We go further together. Team up with neighbors, classmates, cities, and countries across cultural and geographic boundaries.

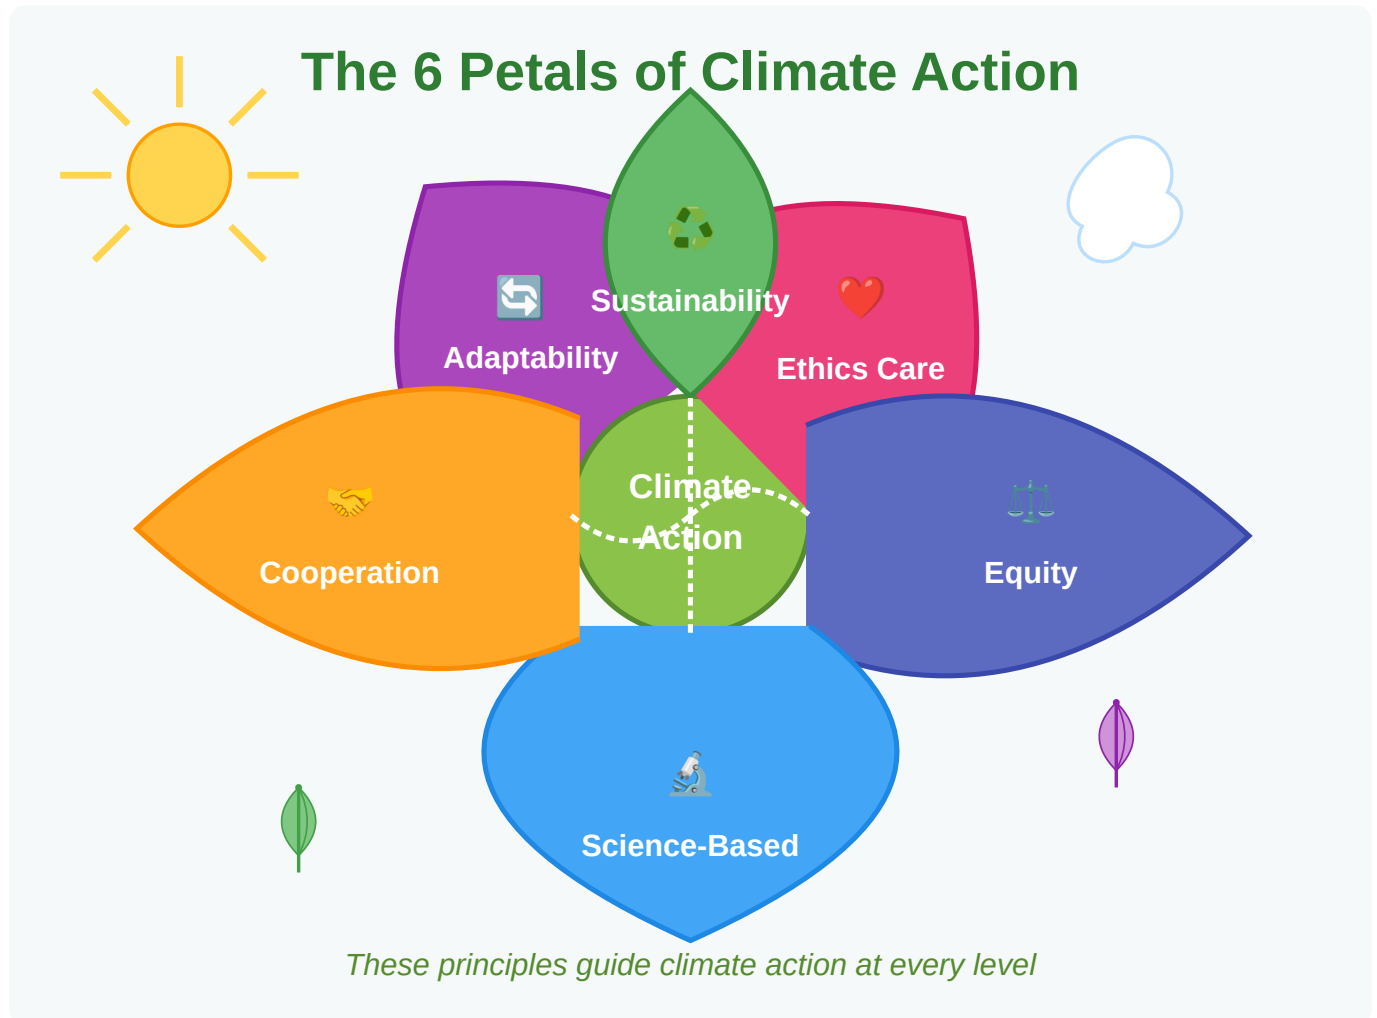

5. Adaptability

Things change fast. Plans must evolve as we learn more and face new challenges.

❤️ 6. Ethics & Care

Every living being matters. Climate action is about love for people and the planet.

🧱 Page 3: 4 Pillars of Climate Action

Climate action has four main focus areas. Wherever you live, you can get involved in one — or all!

▼ 1. Mitigation – Stop Making It Worse

- Reduce emissions from energy, transport, and food

- Protect forests, oceans, wetlands
- Be mindful of consumption

Your tools: biking 🚲, voting 🗳️, plant-based food 🥗, low-energy appliances 💡

Success story: In Durban, South Africa, youth-led tree-planting initiatives have restored urban forests while creating green jobs and cooling neighborhoods.

2. Adaptation – Prepare for Change

- Make homes and schools climate-resilient
- Support vulnerable groups
- Learn emergency preparedness

Your tools: rainwater collection 💧, planting trees 🌳, awareness campaigns 📣

Success story: In Bangladesh, youth teams are creating floating gardens in flood-prone areas, ensuring food security while adapting to rising waters.

3. Energy Transition – Power Our Future

- Push for clean energy (solar, wind)
- Save energy at home and school
- Join or create youth energy co-ops

Your tools: energy audits 📋, LED lights 💡, advocacy ⚖️

Success story: In Germany, over 180 energy cooperatives partly run by young people have helped communities transition to locally-owned renewable energy.

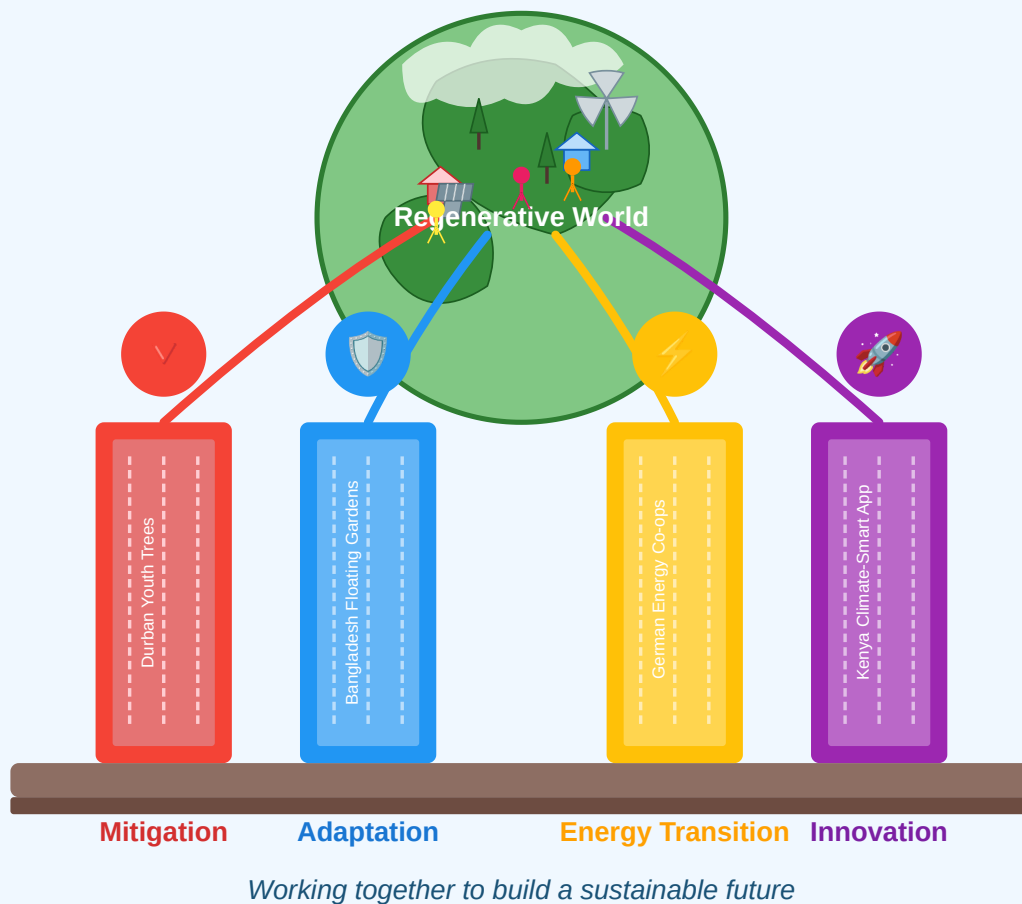

4. Innovation – Imagine What's Next

- Support youth-led solutions
- Use tech for climate action
- Build apps, models, or campaigns

Your tools: design thinking 💡, hackathons 💻, storytelling 🗣️

Success story: In Kenya, youth innovators developed an app that connects small-scale farmers with climate-smart agricultural techniques, improving resilience.

4 Pillars of Climate Action

Page 4: From Policy to People

How decisions are made:

-  **Global:** Agreements between countries (e.g. Paris Agreement)
-  **National:** Laws, budgets, climate targets
-  **Local:** Urban planning, transport, energy systems
-  **Community:** Schools, clubs, workplaces

Your voice matters at each level. Ask:

- Is your school climate-smart?
- Does your town invest in renewables?

- Are youth involved in climate decisions?
- Are vulnerable communities represented?

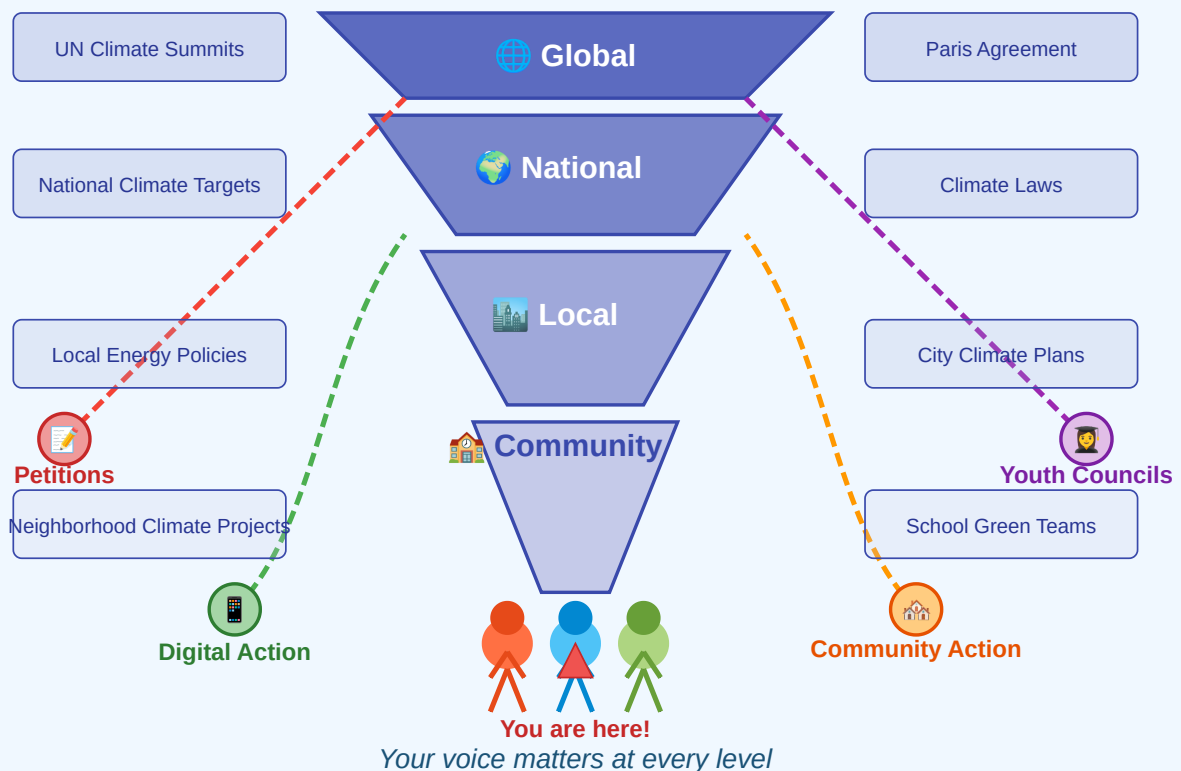

How to engage:

- Join youth councils 🎓
- Attend local climate forums 🏠
- Start a petition or project 📝
- Propose climate goals to your town 🧑🔧

Digital action paths:

- Create climate awareness campaigns on social media 📱
- Organize virtual climate summits across schools 💻
- Use climate apps to track your community's carbon footprint 📊
- Join global digital climate strikes 🌐

From Policy to People

✓ Page 5: Action Checklist

🎯 Every small act counts. Try these weekly:

Task	Emoji	Impact Level
Walk, bike, or bus instead of driving		Personal
Turn off unused devices		Personal
Eat more plant-based meals		Personal
Write your local representative		Community
Start a school or neighborhood campaign		Community
Join a climate action group		Community
Compost or reduce food waste		Personal
Share climate information on social media		Network
Create climate art or stories		Cultural
Support indigenous climate initiatives		Justice

Start a community action kit:

- Shared tools (e.g., thermal camera, energy meter)
- Meeting space (physical or virtual)
- Flyers & outreach material
- List of local allies
- Digital collaboration platform
- Resource library with multilingual materials

Youth Climate Toolkit

Page 6: Connecting Globally, Acting Locally

Climate change affects different communities in different ways. How we respond should respect cultural contexts while working toward shared goals.

Regional Climate Realities:

- **Coastal Communities:** Rising seas, storms, fishing impacts
- **Arid Regions:** Water scarcity, heat, changing agriculture
- **Arctic Areas:** Melting ice, traditional lifestyle changes
- **Urban Centers:** Heat islands, air quality, transportation
- **Island Nations:** Existential threats, marine ecosystem changes

Cultural Approaches to Climate Action:

- Indigenous conservation methods

- Community-based decision making
- Intergenerational knowledge sharing
- Local adaptation strategies

Find your global climate community:

- Fridays For Future
- Indigenous Environmental Network
- Global Youth Biodiversity Network
- Climate Action Network

Page 7: Digital Climate Action

The digital world offers powerful tools for climate action:

Social Media Campaigns:

- Create viral challenges (#TrashTag, #PlantForThePlanet)
- Share infographics on climate solutions
- Amplify voices from frontline communities
- Live-stream climate events

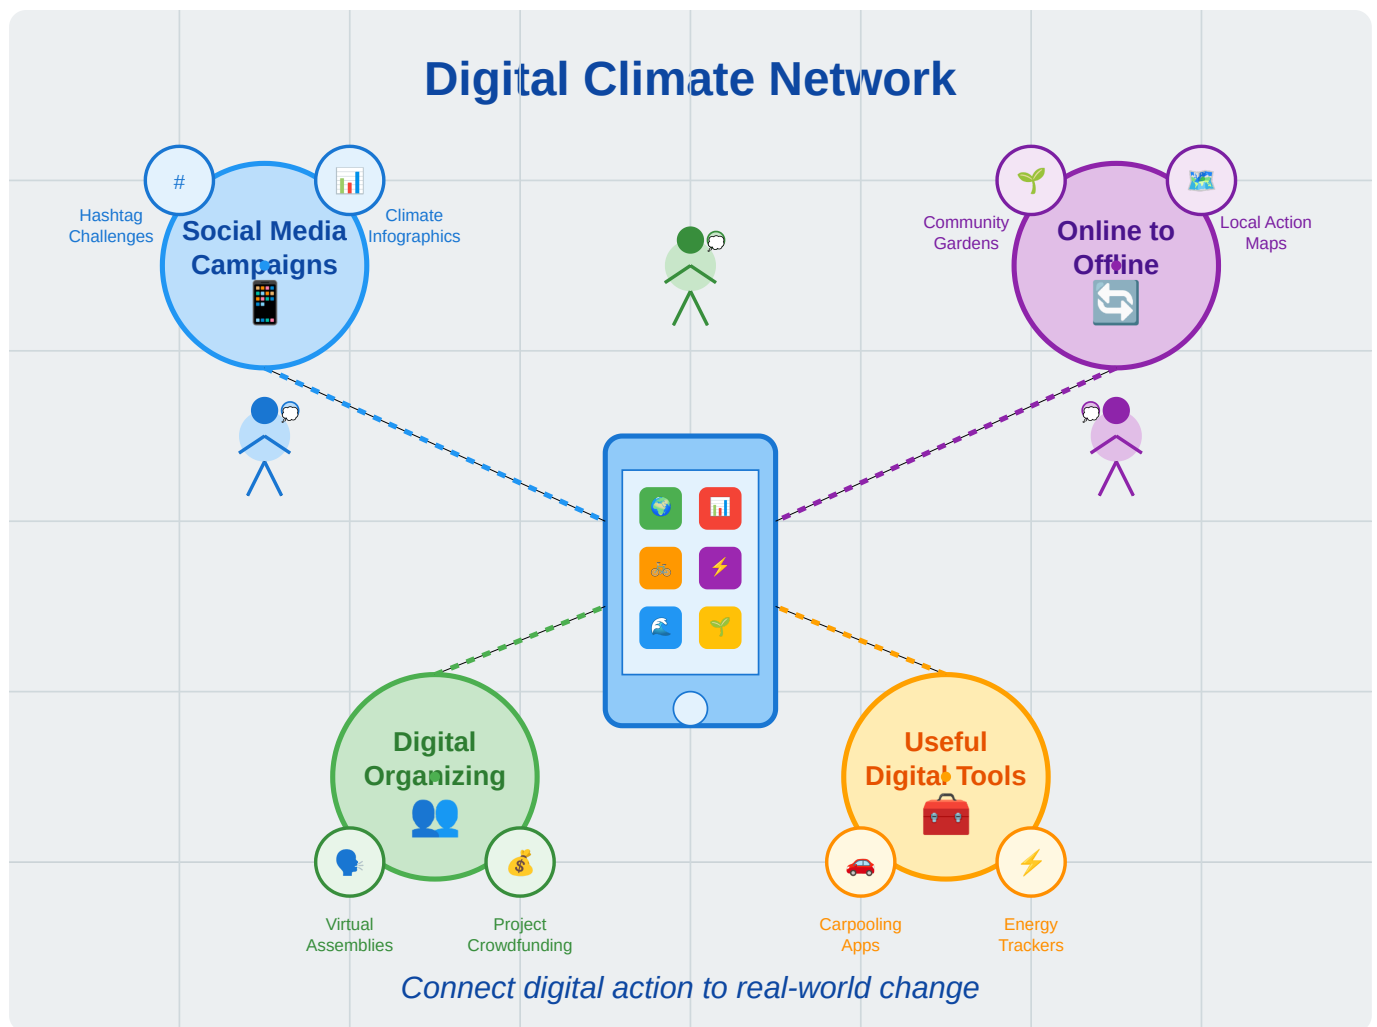

Useful Digital Tools:

- Climate footprint calculators
- Satellite monitoring apps
- Carpooling/bikesharing platforms
- Energy tracking tools

Digital Organizing:

- Virtual climate assemblies
- Online petition platforms
- Crowdfunding for local climate projects
- Digital skill-sharing networks

Online to Offline: Remember to connect digital action to real-world change in your community!

Page 8: Our Shared Future

Imagine a world where:

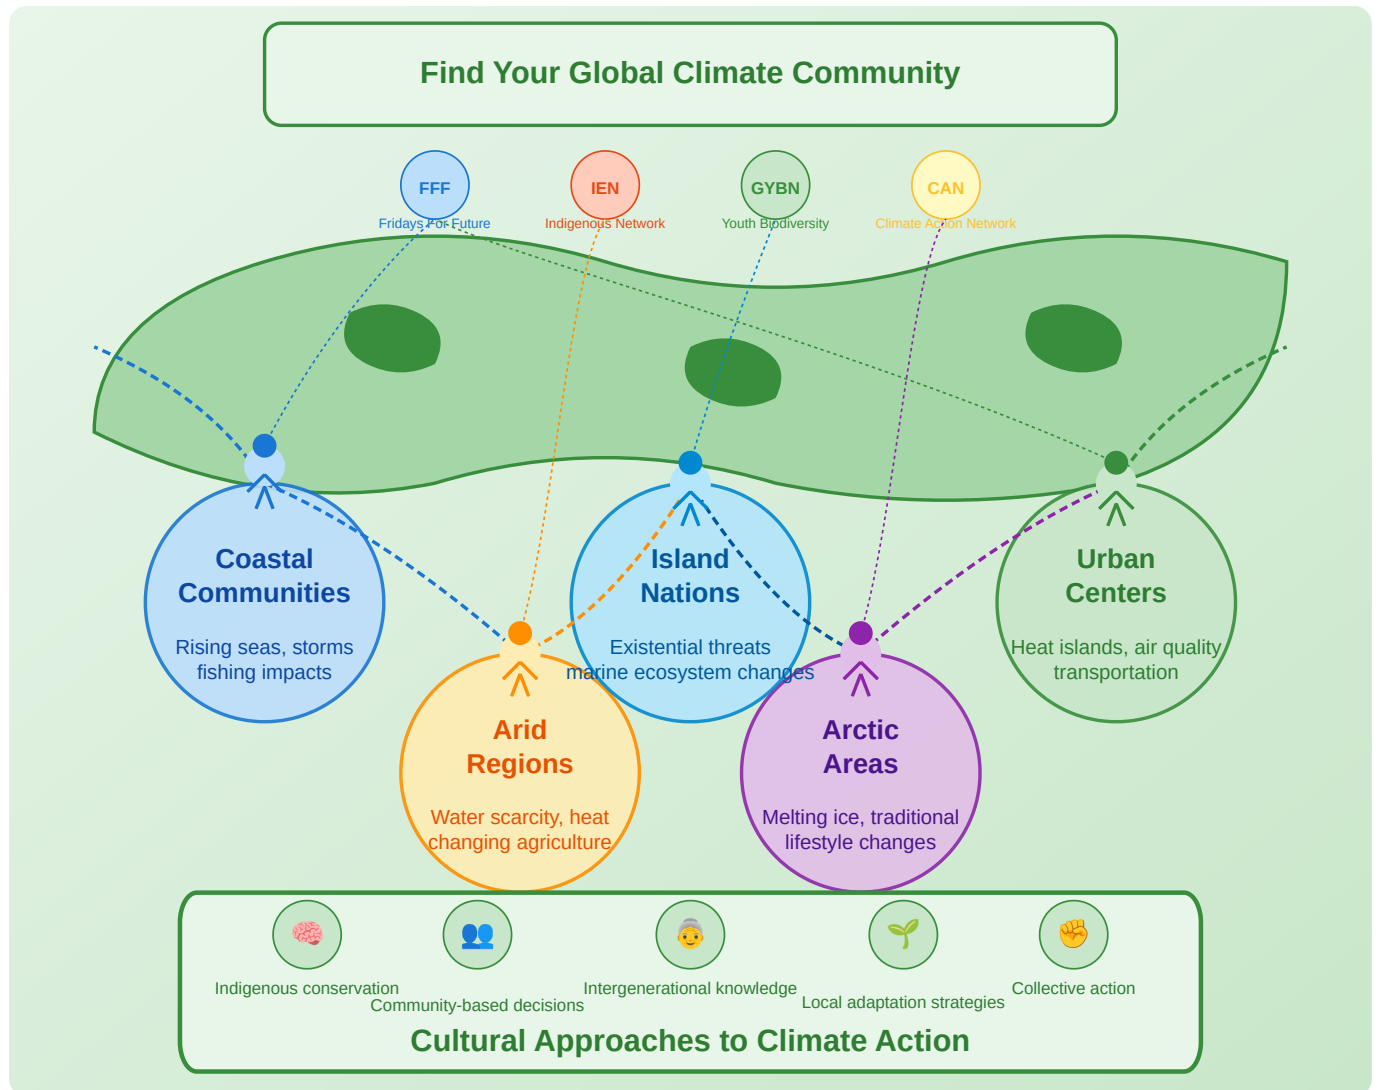

- Cities are green and cool 🌳
- Energy is clean and free ☀️
- Food is local and nourishing 🥗
- Every voice is heard 🗣️
- Nature is thriving 🌾
- We live in peace with each other and the Earth 🤝🌍
- Indigenous wisdom guides our relationship with the planet 🧠
- Technologies serve people and planet 🔧

That world isn't fantasy — it's a possibility. But it won't build itself.

You are a climate actor. A future shaper. A bridge to what's next. 🏠

Let's co-create the future — together.

"We are ancestors of the world to come."
